

### Network Analytics for LTE Migrations

## How to Address the Top 5 Issues in Capacity Management in Co-existent 2G/3G/LTE Networks

Are you planning a migration to LTE? Have you already started the migration process? This checklist can help you:

1. Use common backhaul & core evolved packet core (EPC) technologies in 2G/3G/4G environments
2. Maximize Spectrum Utilization
3. Analyze network capacity & the impact of the launch of new devices (e.g. LTE enabled ones) & other revenue generating products/services
4. Proactively assess and manage network resource bottlenecks and their impact on subscriber QoE
5. Choose the best migration option for your network
